

CLAIMS

I Claim:

1. A school document storage system, comprising:
an outer housing having an upper opening and a cover member for selectively closing said upper opening; and
a plurality of inner compartments removably positioned within an interior of said outer housing, wherein each of said inner compartments is capable of storing a grade level of school documents.

2. The school document storage system of Claim 1, wherein said cover member includes a plurality of closure apertures and a plurality of closure members attached to said outer housing, wherein said closure members are catchably received within said closure apertures.

3. The school document storage system of Claim 1, wherein said cover member preferably has an upper member, a front member extending from said upper member, a first side member extending from said upper member, and a second side member extending from said upper member opposite of said first side member.

4. The school document storage system of Claim 3, wherein said front member, said first side member and said second side member are pivotally attached to said upper member.

1 5. The school document storage system of Claim 3, wherein said upper
2 member has a rectangular shape.

3
4
5 6. The school document storage system of Claim 5, wherein said outer housing
6 has a rectangular box structure.

7
8
9 7. The school document storage system of Claim 1, wherein said cover member
10 is pivotally attached to said outer housing.

11
12
13 8. The school document storage system of Claim 1, including a pair of outer
14 handles attached to opposing sides of said outer housing.

15
16
17 9. The school document storage system of Claim 1, wherein said inner
18 compartments are comprised of at least 6 inner compartments each having lid with a
19 plurality of engaging members that selectively engage a corresponding plurality of slits
20 within said inner compartments.

21
22
23 10. The school document storage system of Claim 9, including a plurality of
24 labels attached to said inner compartments indicating what grade level of school
25 documents are to be retained within each of said inner compartments.

1 11. The school document storage system of Claim 1, including a transparent
2 pocket attached within a front portion of said outer housing for receiving a display
3 item.

12. The school document storage system of Claim 11, wherein said cover member includes a plurality of closure apertures and a plurality of closure members attached to said outer housing, wherein said closure members are catchably received within said closure apertures.

13. The school document storage system of Claim 11, wherein said cover member preferably has an upper member, a front member extending from said upper member, a first side member extending from said upper member, and a second side member extending from said upper member opposite of said first side member.

14. The school document storage system of Claim 13, wherein said front member, said first side member and said second side member are pivotally attached to said upper member.

15. The school document storage system of Claim 13, wherein said upper member has a rectangular shape.

16. The school document storage system of Claim 15, wherein said outer housing has a rectangular box structure.

1

2 17. The school document storage system of Claim 11, including a pair of outer
3 handles attached to opposing sides of said outer housing.

4

5

6 18. The school document storage system of Claim 11, wherein said inner
7 compartments are comprised of at least 6 inner compartments each having lid with a
8 plurality of engaging members that selectively engage a corresponding plurality of slits
9 within said inner compartments, and a plurality of labels attached to said inner
10 compartments indicating what grade level of school documents are to be retained
11 within each of said inner compartments.

12

13 19. A school document storage system, comprising:

14 an outer housing having an upper opening, a front cutout extending from said
15 upper opening and a cover member for selectively closing said upper opening;

16 a plurality of inner compartments removably positioned within an interior of
17 said outer housing, wherein each of said inner compartments is capable of storing a
18 grade level of school documents;

19 wherein each of said inner compartments includes an inner handle;

20 a transparent pocket attached within a front portion of said outer housing for
21 receiving a display item;

22 wherein said cover member includes a plurality of closure apertures and a
23 plurality of closure members attached to said outer housing, wherein said closure
24 members are catchably received within said closure apertures;

25 wherein said cover member preferably has an upper member, a front member
26 extending from said upper member, a first side member extending from said upper
27 member, and a second side member extending from said upper member opposite of
28 said first side member;

1 wherein said front member, said first side member and said second side
2 member are pivotally attached to said upper member;

3 wherein said upper member has a rectangular shape;

4 wherein said outer housing has a rectangular box structure;

5 wherein said cover member is pivotally attached to said outer housing;

6 a pair of outer handles attached to opposing sides of said outer housing; and

7 wherein said inner compartments are comprised of at least 6 inner
8 compartments each having lid with a plurality of engaging members that selectively
9 engage a corresponding plurality of slits within said inner compartments; and

10 a plurality of labels attached to said inner compartments indicating what grade
11 level of school documents are to be retained within each of said inner compartments.

12
13
14 20. A method of operating school document storage device, wherein said
15 school storage device is comprised of an outer housing having an upper opening and a
16 cover member for selectively closing said upper opening, and a plurality of inner
17 compartments removably positioned within an interior of said outer housing wherein
18 said inner compartments represent a plurality of school grade levels, said method
19 comprising the steps of:

20 (a) providing a school document from a student's grade level;

21 (b) opening said cover member;

22 (c) removing selected inner compartment representing said grade level from
23 said inner compartments;

24 (d) opening said selected inner compartment;

25 (e) inserting said school document into said selected inner compartment;

26 (f) closing said selected inner compartment; and

27 (g) closing said cover member.
